SUMMARY

Product Manager with 7 years of experience building consumer booking and marketplace products, 5 of them at MediBuddy where I own the demand side of a INR 150 Cr surgery business running ~1,500 procedures and ~INR 11 Cr per month. I have authored 5 PRDs shipped to development, built four systems from zero, and own the funnel end to end: discovery, spec, catalog and pricing, payment and cancellation flows, lifecycle CRM, and the analytics that prove it worked. Applied Mathematics graduate, NIT Surat. I write SQL, instrument my own events, and ship working prototypes when that is the fastest way to learn whether an idea deserves a sprint.

SELECTED IMPACT: Hospital finder live, ~50 leads/day to INR 21 lakh/month | Funnel entries 90k to 150k/month | ~2,300 leads/month from insurance transparency | 60-70 surgeries/month booked with zero human involvement | 350-seat CRM migration delivered | INR 72 lakh of billing variance reconciled

CORE COMPETENCIES

Product discovery and user research | PRD and functional specification authoring | Phased scoping and effort estimation | Roadmap prioritization | A/B testing and experiment design | Funnel and conversion optimization | Catalog, taxonomy and inventory design | Payments, deposits, refunds and cancellation policy | Lifecycle CRM and retention | Cross-sell and cross-vertical growth | Go-to-market | Stakeholder management across 9 teams | Agile and Scrum

Product analytics: CleverTap, Hotjar, Google Analytics via Google Tag Manager, Snowplow event tracking, Apache Superset, Looker Studio, Redash, PromptQL, Google Search Console

Platforms and tools: Jira, Confluence, Figma, LeadSquared, SuperLeap, Retool, Typeform, n8n, REST APIs, Webhooks, WhatsApp Business API, SQL (MySQL), Python (working knowledge)

PROFESSIONAL EXPERIENCE

MEDIBUDDY — Gurugram, India

India's largest digital healthcare platform | Surgery line grew INR 100 Cr to INR 130 Cr to INR 150 Cr; 95% corporate customer mix

Senior Manager, Product | Jul 2026 - Present

Analyst III / Analyst II, Surgery New Initiatives | Apr 2023 - Jun 2026

Manager / Management Trainee, Corporate Business | Jun 2021 - Mar 2023

Own the acquisition-to-surgery funnel and the dental booking product. Squad of one backend engineer, one frontend engineer and one designer; I instrument and build all product analytics myself.

Product ownership — 5 PRDs authored, 1 contributed

- **Dental Procedure Booking (PRD owner).** Targeting growth from an INR 16-17 Cr annual run rate to INR 27 Cr, a 75% increase, by converting dormant corporate wallet balances into booked procedures. Scoped and phased 22 requirements into an 18-item V0 at ~41 person-days: a 470-SKU catalog, a flat INR 499 deposit collected at booking with post-procedure delta collection or refund, provider eligibility rules, the request-to-order data model, seven lifecycle events, auto-cancellation, an Ops settlement dashboard, event tracking and hourly CRM sync. Drove decisions across nine teams with an explicit decisions-made and questions-open register.
- **Removed a 7 person-day rule-engine build from scope** by reducing real-time evaluation to a single corporate-eligibility check and moving coverage, copay and capping to Ops at settlement, delivering the same outcome at a fraction of the effort.
- **Insurance Policy Decoder (PRD owner).** Patients defer elective surgery when they cannot tell what their corporate policy covers. Built the public prototype myself to validate demand, then shipped in-app at medibuddy.in/surgery-care/policy across 19 corporate accounts and 90+ conditions each, returning covered amount, room-rent cap, copay, pre and post-hospitalisation windows, inclusions and exclusions per beneficiary grade. Designed the access-control model — corporate email domain match plus OTP for unauthenticated users — to prevent leakage of corporate policy data. The decoder page contributes ~30 leads/day; with the grade-level extension and home-screen entry point, insurance transparency delivers ~2,300 leads/month.
- **Cashless Hospital Finder (PRD owner) — live in production.** Replaced a lead-capture form losing 80% of users with an interactive finder taking GPS, pincode or city plus treatment and insurer, returning hospitals ranked by distance, rating and insurance panel, then the doctors there who do that procedure. Live at medibuddy.in/surgery-care/find-hospitals: ~50 leads/day, ~30 surgeries/month, INR 21 lakh booked value monthly; form-completion target 19% to 45%. Prototype built and open-sourced by me: github.com/raopunit95/surgery-network-finder.
- **New Services bottom-navigation hub (PRD owner).** Analysed ~1.5M monthly bottom-nav taps to justify replacing the lowest-performing icon (807 taps) with a services hub deep-linking into Surgery, Wellness, Programs and Fitness, with entity-level configurability, Snowplow event tracking and homepage fallback on broken deep links. The hub now reaches ~180k unique users and ~10k unique visitors per day; surgery captures ~300 of those daily, converting ~10,000 monthly landings into ~4,000 leads at a 40% landing-to-lead rate.
- **Condition-to-Department Mapping Tool (PRD owner).** Specified a Retool-backed mapping layer powering surgery page search, listing and automatic CRM opportunity creation with correct department routing — including uniqueness validation, case-insensitive and fuzzy matching, an Others fallback, CSV bulk operations, an audit log and role-based access. Standardised 218 sub-departments across 24 departments.
- **Unified Network and Order Management (contributor).** Defined the CRM integration fields, API contract and sync logic for an engineering-led programme unifying surgery OPD and in-clinic consult networks, using the CRM opportunity ID as the primary key for end-to-end order continuity.

Growth, conversion and cross-sell

- **Grew funnel entries from 90,000 to 150,000 per month, a 1.4x lead increase at flat acquisition cost**, by opening entry points where patient intent already existed — bottom navigation, claims page, benefits surface and corporate-specific surgery icons — rather than buying traffic.
- **Opened cross-vertical lead capture** from lab tests, medicine orders and offline OPD consultations into the surgery funnel, converting existing platform traffic into surgery demand instead of paying to acquire it again.
- **Increased condition-page conversion from 1.2% to 1.4%** and added ~1,200 leads per month by shipping a no-code CMS that let marketing publish pages without an engineering sprint.
- **Recovered dental payment drop-offs** by creating leads from users abandoning at the payment step, delivering a 5% revenue uplift on the dental line.
- **Deliberately traded volume for quality** by replacing misleading symptom options with clinically correct terms, knowingly accepting a loss of 15-20 leads per day because those leads never converted to surgery.
- **Ran continuous creative and journey experiments including negative results:** an animated creative variant reduced click-through from 3.5% to 2.7%, so it was discontinued and the static treatment retained.

Automation, AI and self-service

- **Shipped an automated surgery consult booking service** combining a pincode-to-nearest-hospital API with a full conversational booking flow, producing ~10 bookings per day with no human involvement and 60-70 surgeries per month, equivalent to 5-6 agents of capacity at 11-12 surgeries per agent per month. Specification to production in under three months.
- **Currently piloting an AI lead-qualification model** scoring intent 0 to 10, designed to qualify the same ~6,000 leads per month with 60% of the current agent headcount. Projected score distribution: 15% above 7, 50% between 4 and 7, 35% below 4 — routing high-intent leads to agents and low-intent leads to automation.
- **Built the organization's first CRM chatbot** with no internal precedent and no vendor playbook, iterating the journey until leads captured cleanly into the CRM. It became the foundation the auto-booking service was built on.

Retention, feedback and closing the data loop

- **Closed a broken post-surgery data loop.** Once a patient submitted a form their record moved into the CRM and left the MediBuddy ecosystem, so completed surgeries never flowed back to the app. I specified a discharge order surfacing bills, invoices, discharge summary and prescriptions in-app across 3,300+ surgeries, restoring the round trip and giving the patient a reason to return.
- **Built the voice-of-customer loop** by capturing CSAT and NPS through Typeform and the CRM across the surgery and dental journeys, sustaining CSAT above 60 and NPS above 7, and rebuilt the WhatsApp response journey so both business lines reported into separate buckets — raising attendance capture by 3-4%. Designed the underlying lifecycle layer of 22 email and 14 WhatsApp touchpoints mapped to funnel stage.

Organic growth and market analysis

- **Built the demand model behind the organic growth programme:** a 50-city by 36-procedure map covering 229,799 surgeries and 750 city-condition pairs, an audit of 3,231 site URLs and ~23,300 competitor keywords across three competitors, and a quarter-over-quarter Search Console comparison across 1,000 queries and pages. Estimated impact: 5,000 leads per month.
- **Identified an unquantified technical blocker** — mobile performance scores of 33-43 and mobile largest-contentful-paint of 10.8-16.9 seconds on the pages the programme depended on — and proposed the URL architecture and master content template for cost-comparison pages.

Platform and data foundations

- **Owned the customer side of a full CRM replacement across ~350 seats** (LeadSquared to SuperLeap), retiring two systems and cutting over a live operation carrying ~5,000 outbound calls per day with no business interruption. Owned data preparation, cleaning and validation across 300+ GB and 76,903 records — explicitly excluded from the vendor contract — and identified two lines of business missing from the vendor requirements document before build.
- **Built the previous CRM from an unstructured instance into the operating system of the business:** 250+ data points, trigger logic, task and follow-up rules, ownership routing, 62+ automation workflows and 5 internal tools. Improved data integrity across the funnel: duplicate-lead protection from 180 to 290 per day, reverse duplicates from 20% to 15%, and inbound call connect rate from 1-in-10 to 5-in-10.
- **Owned the data and reconciliation layer of a nationwide corporate vaccination programme** delivered by field teams: 1,340 camps, 175 corporate accounts, 104 cities, 117 hospital partners, 249,000 doses against INR 27.9 Cr of billing. Built the three-way reconciliation run before every invoice; 308 of 838 dual-source camps disagreed, and resolving 7,666 doses of variance protected ~INR 72 lakh in billing accuracy.

ZINGBUS — Gurugram, India

Associate Program Manager, South Zone | May 2022 - Jul 2022

- **Designed and launched 10 intercity routes for the South India zone** — Bangalore to Hyderabad, Mysore, Mangalore, Goa, Shimoga, Bellary and Tirupati among them — defining city pairs, service frequency and time-of-day scheduling from competitive market and schedule analysis mapped against demand by corridor. Delivered a running timetable within a fixed three-month engagement.

OLX PEOPLE — Gurugram, India

Operations Manager | May 2019 - Mar 2021

- **Scaled supply for high-volume hiring by 12x while cutting turnaround time by 3x** across 10+ new cities; improved conversion-to-joining from 10% to 17%. Led a 30-person team across 5 accounts billing more than INR 20 lakh per month.

EDUCATION

Sardar Vallabhbhai National Institute of Technology (NIT), Surat

Integrated M.Sc., Applied Mathematics | 2014 - 2019 | CGPA 8.21
